

Technical Information:

Desiccant Material:	Orange Silica Gel beads
Size:	5.9" (150mm) x 3.5" (90mm) x 0.4" (10mm)
Packaging material:	Canister: Aluminum
	Outer packaging: foil bag
Shelf life:	Removed from foil bag: 3-6 months (depending on use) Sealed foil bag: up to 3 years
Storage:	Store in a dry cool area out of direct sunlight

Silica Reactivation

Silica gel beads are orange in color when active (dry). When used as a desiccant, the gel beads will gradually change color from orange to green. Once the gel beads turn green they are no longer active and must be heated to remove the accumulated moisture using a conventional oven at 250° F for 3 hours. **Avoid overheating while drying.** When the color of the gel beads returns to orange, the canister is ready to be reused.

Active

Saturated

In the event that silica gel beads are ingested seek medical attention.
